# MORBIDITY REPORT

SHORE STATIONS IN CONTINENTAL UNITED STATES

NAVMED 104

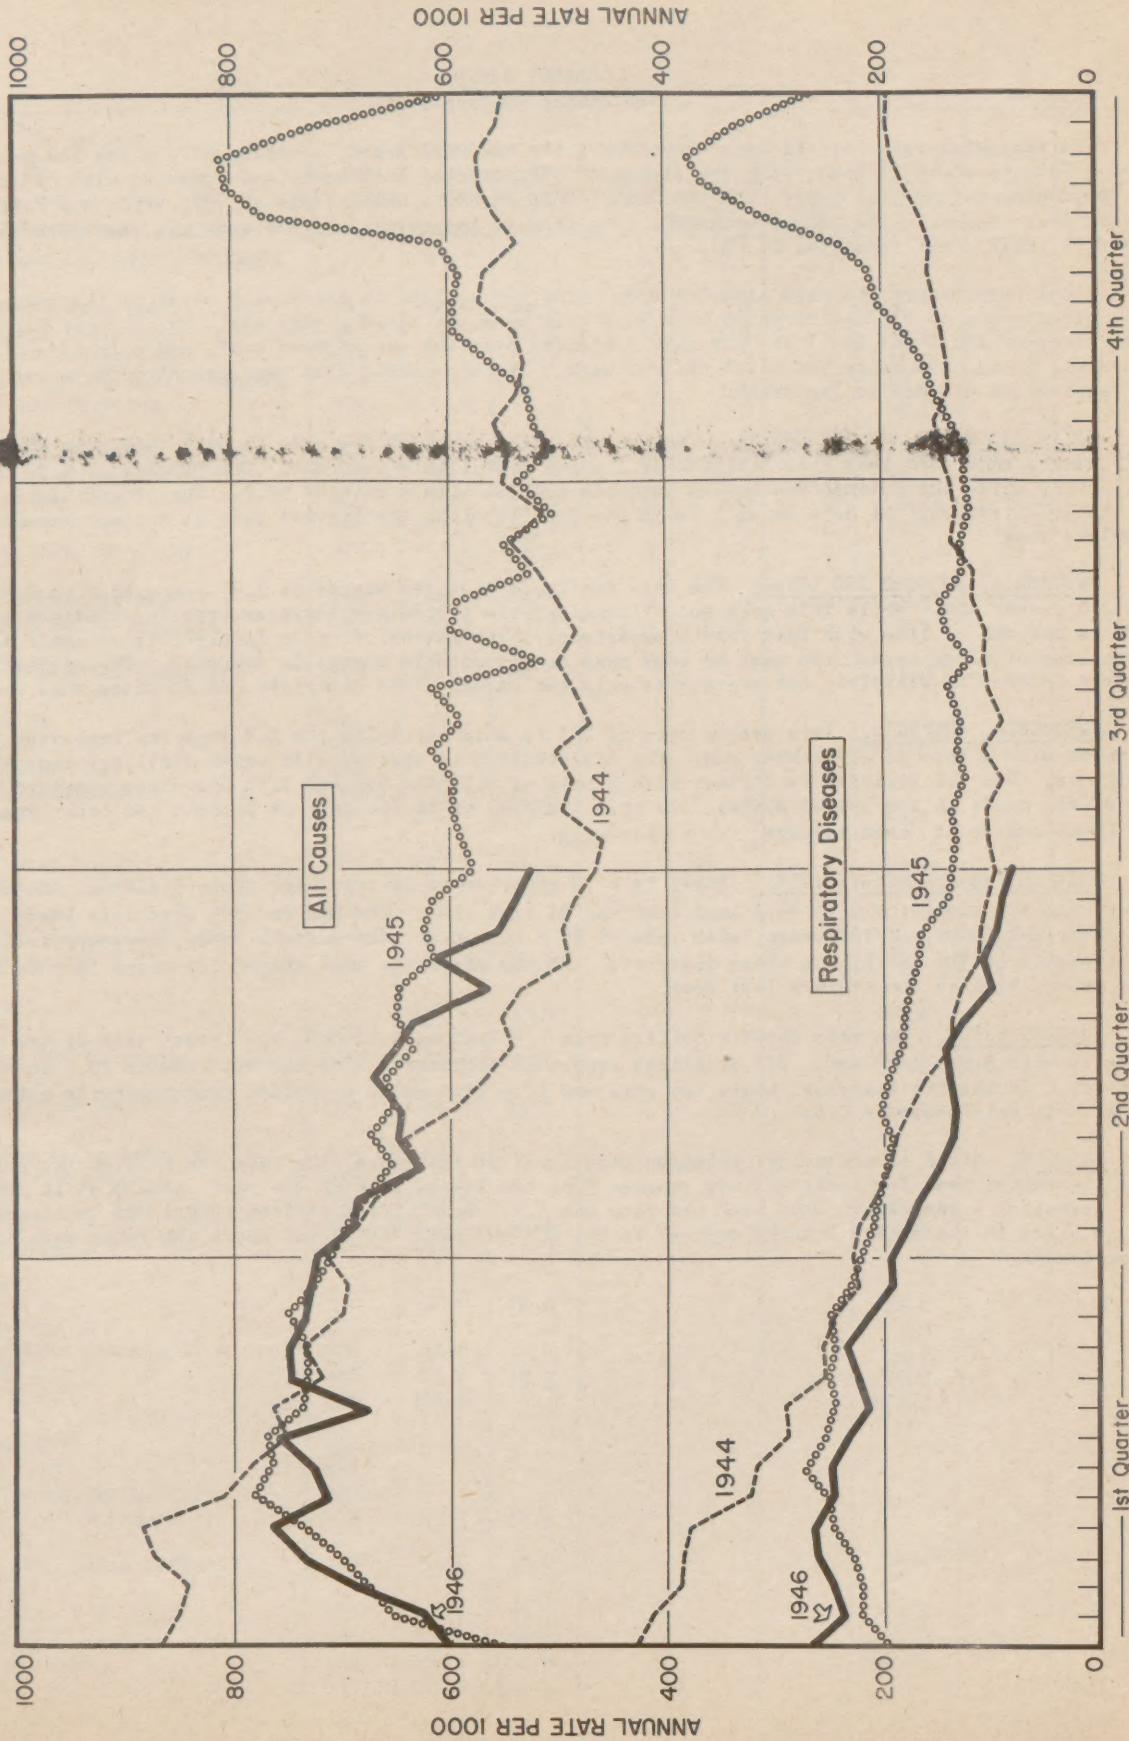

WEEK ENDING 29 June 1946REPORT NO. 235

**RESTRICTED** — THE INFORMATION IN THIS REPORT IS NOT TO BE COMMUNICATED  
DIRECTLY OR INDIRECTLY TO THE PRESS OR TO ANYONE NOT IN THE ARMED FORCES

## ADMISSION RATES—ALL CAUSES AND RESPIRATORY DISEASES

CONTINENTAL LIMITS OF THE UNITED STATES—1944, 1945, 1946

CURRENT TRENDS  
Week ending 29 June 1946

The admission rate for All Causes continues its downward trend, reaching 527, a new low point for the year. This is about 2% lower than the figure of 537 reported last week, and compares with 585 for the corresponding period last year. The 6th District is highest, with a rate of 793, while the Potomac and Severn River Commands are lowest with 280. The biggest improvement of the week was registered by the 13th District, with a 28% reduction to 457.

Total Respiratory Diseases likewise show a further decline to the lowest point of the year to date. The current rate of 83.7 is compared with 90.4 last week and 138.0 a year ago. The 5th and 9th Districts, with rates of 135.1 and 133.7 are the only districts over the one hundred mark, and even here the current rates are 9% and 20% below the rates of last week. It is apparent that the general picture with regard to respiratory disease is favorable.

CATARRHAL FEVER AND INFLUENZA. The current rate for these diseases is 39.3, which is 10% lower than last week's rate, and less than half the 87.1 which prevailed a year ago. The 5th District is highest, with 66.8, while the Potomac and Severn Commands are low with a rate of 10.0. The second highest rate is in the 9th District, but here as well as in the 5th District, the current rate is an improvement over the previous week.

PNEUMONIA, BRONCHO AND LOBAR. The rate for these diseases stands at 1.6, compared with 0.4 last week and 2.0 a year ago. While this week shows a considerable percentage increase over the previous week, the rate is not out of line with last year's experience. The number of cases involved is so small that variations of a few cases from week to week make an appreciable change in the rate. The highest rate, 3.7, occurred in the 7th District, but represents only two cases. Five districts had no cases this week.

PNEUMONIA, ATYPICAL. This week's rate of 1.7 is slightly below the 1.8 reported last week, and compares with a rate of 2.0 a year ago. The distribution is spotty, with seven districts reporting no incidence. The 5th District is highest with a rate of 5.4; the 5th and 11th Districts combined account for 80% of all cases in the United States. In this disease, as in the case of broncho and lobar pneumonia, the total number of cases involved is not alarming.

TONSILLITIS AND PHARYNGITIS. There is a 7% improvement in rates for these diseases, the current figure of 41.1 comparing with 44.2 last week and 47 last year. The 9th and 5th Districts lead, as is true for catarrhal fever and influenza, with rates of 75.6 and 60.6. The present rates, however, represent improvements of 31% and 11% in these districts. Of the districts that showed increases in rate this week, none was as high as the average last week.

SCARLET FEVER. The rate shows a decline from 4.9 last week to 3.5, the lowest rate of the year, which compares with 5.0 a year ago. Six districts report no incidence. The highest rate is 10.7 in the 9th District. In the 5th District, where the rate was 17.4 last week, a decided improvement is noted, bringing the current rate there to 4.6.

MEASLES. After an unusually prolonged high level of incidence, the rate for measles has fallen steadily in the past few weeks and now reaches 2.6, the lowest rate of the year, though still above the 2.0, that prevailed a year ago. Last week the rate was 3.4. Only five districts report any incidence, and 72% of the cases in the entire country occurred in the 9th and 11th Districts, where the rates were 6.8 and 6.9, respectively.
